

Set up your kiosk in 4 simple steps

Employees clock in from any device — all synced through one link.

1

Create your free database

Go to firebase.google.com → **Realtime Database** → **Create** (test mode) → copy the URL that ends in `firebaseio.com`.

💡 Bought **Done-for-you Hosting**? Skip this — we do it for you.

2

Set up Worktrail

Open the app → **Set Up My Kiosk**. Enter your business name, logo & color, choose an admin password, then **paste your Firebase URL**.

3

Add your team

In **Admin** → **Employees**, add each person and give them a **4-digit PIN**. That PIN is how they clock in and out.

4

Share one link

In **Settings** → **Share with Employees**, copy the link and send it to everyone. They open it on their own phone and clock in — no accounts needed.

One link → everyone in sync

Your Firebase

Every device shares the same live records. Your data stays in your own account — we never store it.

Need a hand? We'll set it up with you → support@worktrailhq.com
